

**RESTORATION OF THE CORNER COMMON TO  
SECTIONS 31 AND 32, T4N, R10W, W.M.**

At the corner I find the 5/8" rebar set on Clatsop C.S. 7491 and Tillamook C.S. B-1029, from which the bearing trees scribed by Manius Buchanan on April 16, 1892, bear as follows: the 26" hemlock at N75°E 21.1 ft. is now a decayed and fragmented 36" hemlock stump that bears N75°E 20 ft. to estimated face position. No scribing visible on this B.T. The S.E. and S.W. B.T.'s are gone. The 16" hemlock at N44°W 45.5 ft. is now a decayed 4' high 24" hemlock stump that bears N40°W 45.5 ft. to lower face with original scribes "BT" visible. Also, original scribe marks faintly visible on upper face.

The bearing trees scribed by State Parks in 1981 and recorded on said Clatsop C.S. 7491 and Tillamook C.S. B-1029 are present, but the 13" spruce is now dead, and the 6" hemlock reported at N52-1/2°E 9.8 ft. is now an 8" hemlock with overgrown face that bears N60°E. It should be noted that the State erroneously reports Buchanan's N.W. B.T. as gone. The State also reports a 40" hemlock stump (no bearing or distance given) scribed "S5 BT". I can not find any such B.T. at this corner.

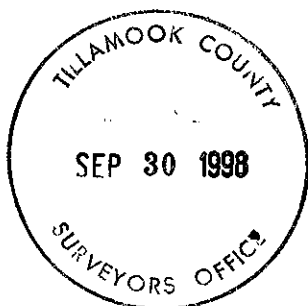

I scribe three new B.T.'s as follows: an 18" hemlock bears S55°E 17.92 ft. to an 8" spike at base of face scribed "T4N R10W S32 BT"; a 16" hemlock bears S36°W 36.4 ft. to an 8" spike at base of face scribed "T4N R10W S31 BT"; a 16" spruce bears N20°W 23.76 ft. to an 8" spike at base of face scribed "T4N R10W S31 BT". An 8" hemlock (State's B.T.) bears N60°E 9.30 ft. to an 8" spike at base of overgrown face scribed by State. State's steel post bears west 1.5 feet from corner.

**Note:** Bearings reported to bearing trees are hand compass bearings using a declination of 21 1/2° east. All bearing trees scribed by me are posted with yellow aluminum location tags. On all bearing trees scribed by me, I nailed in center of scribed "B" a 3/4" brass disk stamped "LS 849".

Date: 9/22/98
